RIISING TO THE CHALLENGE

A MESSAGE FROM PDC EXECUTIVE DIRECTOR RAY SHIRKHODAI

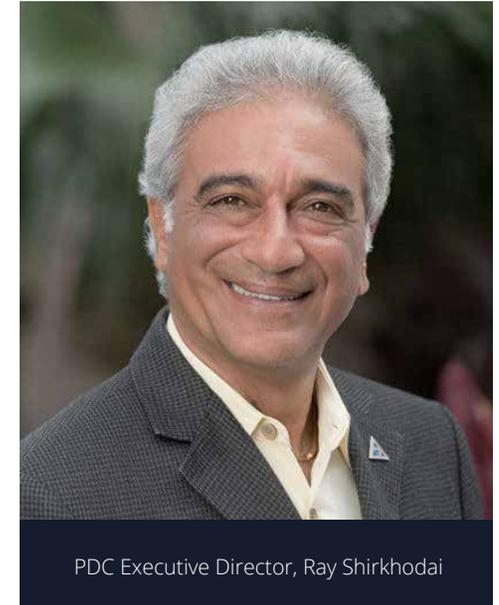

It was an unprecedented year of tragic heartbreak for the global community in 2020. From a worldwide pandemic, to large fires and ever-lasting storms intensified by climate change, there have been devastating losses to lives and livelihoods. And, for those of us involved in the non-stop humanitarian missions, it meant that we had to do more, even as we were forced to change how things get done.

COVID-19 inflicted significant hardship on the global population. From the tragic loss of life, to the painful economic and social consequences of protective lockdown measures, it required fundamental and expedited change. For the PDC Ohana, there were no exceptions. Like thousands of others, we were faced with the need to protect our workforce while simultaneously ensuring continuity of our mission and operations.

We were among the very first to act quickly to restructure our systems to work remotely; supporting our many partners and stakeholders around the globe with the latest situational awareness and expert assessment of rapidly changing circumstances.

During the early onset of COVID-19 and throughout this ongoing event, PDC has experienced a steady and growing surge in demand for our data, analysis, and support products. In many cases, this was due to the complex nature of disaster scenarios in the COVID-19 era, forcing social distancing to be balanced against the need to assist and shelter large numbers of people. In this precarious circumstance, our predictive analysis helped responders reduce uncertainty and better prepare.

In spite of these serious challenges, Pacific Disaster Center and its many partners in disaster management, humanitarian assistance, and members of our global community rose to the challenge and worked together to protect the lives, livelihoods, and the well-being of our societies. We are proud to have been able to serve alongside you during this time and look forward to the brighter, safer world that lies ahead of our collective efforts.

ABOUT PDC

For the last 25 years, Pacific Disaster Center (PDC) has responded to the most demanding needs of government and nonprofit clients worldwide as part of our mission to save lives and reduce disaster risk. As an applied research center managed by the University of Hawaii, we are continuously developing new technologies and best practices to help our many global partners effectively mitigate, prepare for, respond to, and recover from disasters. We stand by the side of government agencies, nongovernmental organizations (NGOs), and humanitarian relief organizations when it matters most. PDC also helps these organizations with proactive measures including baseline risk and national disaster preparedness assessments, mitigation strategies, exercises, and training on use of our powerful DisasterAWARE® technology. DisasterAWARE provides global risk intelligence, early warning, and the largest collection of global data and modeling resources for assessing risk and hazard impacts.

AI FOR HUMANITY™

ARTIFICIAL INTELLIGENCE HELPING TO SAVE LIVES

Benefiting humanity through the use of AI

PDC continues to bring advancements in artificial intelligence, developing innovative applications to improve disaster management decision making and disaster risk intelligence.

HAZARD FINDER AI (NEW)

Extend and scale global hazard detection via Natural Language Processing

In many parts of the world, especially in developing nations, disasters are under-reported due to lack of institutional capacity or consistent reporting. In 2020, PDC launched an initiative to create an expert system that analyzes daily reports from thousands of credible news outlets, looking for hazards. The initial version of AI, named Hazard Finder AI, started experimental operation in late 2020, and will be fully operational in 2Q21, massively scaling global hazard detection and reporting.

AI deep learning

Under the same initiative, PDC developed a proof-of-concept for a deep learning machine which is trained by the expert system to remove supervised training constraints. Development of this system will revolutionize global hazard detection, reporting, and tracking, along with risk reduction strategies.

HAZARD FINDER AI

KEY BENEFITS

Comprehensive global hazard detection—all day, every day.

Scalable to search an unlimited number of trusted online sources.

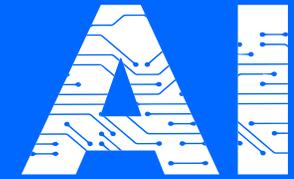

Exponentially faster at detecting hazards than manual processes.

★ **All hazards supported.**

AI FOR HUMANITY™

ARTIFICIAL INTELLIGENCE HELPING TO SAVE LIVES

SMART DESCRIPTIONS AI

Natural language processing humanizes hazard information

In 2020, PDC fully operationalized its natural language processing AI program in DisasterAWARE—transforming scientific data from multiple sources into easily-understood hazard descriptions that improve situational awareness and decision making for disaster response. The technology was released in beta in 2019.

FIRST FIVE CONSORTIUM (AI PARTNERSHIP)

Under a 2020 White House initiative, the First Five Consortium took place on August 12 to formally bring together government, industry, academic, and nonprofit organizations to develop AI platforms in support of humanitarian relief and disaster response efforts. Following a White House meeting in February for use of Artificial Intelligence (AI) for Humanitarian Assistance / Disaster Relief (HA/DR) operations, initiated by the Department of Defense (DoD) Joint AI Consortium (JAIC), the Department of Energy (DOE) was tasked to formulate a vehicle for a “coalition-of-the-willing” to operationalize developmental capabilities and products to enable first responders to better respond to natural disasters and help them save lives and protect property. This resulted in the First Five Consortium, referring to the first five minutes after a disaster when new information products can play a key role in the response operations.

Co-chaired by DOE and Microsoft, PDC is one of the 10 founding members. ★

AFTER
 A tropical cyclone forecast has been issued by National Weather Service (NWS) on September 17, 2020, 09:00:00 GMT. Tropical Cyclone - Sally, is located in the Atlantic Ocean with maximum sustained winds of 165 km/h (105 mph), and wind gusts up to 140 km/h (85 mph). According to this forecast (#25), the cyclone is headed Northeast at about 19 km/h (12 mph), and is expected to remain at this strength over the next 36 hours. It is cautioned, however, that the storm's actual position may shift significantly over the next few days. Based on the current forecast (the storm's center and path), Tropical Cyclone Sally will make landfall within the next 24 hours in Alabama (United States) as a Category 2 hurricane, with sustained winds of about 165km/h (105 mph). For the extended forecast, an estimated 2.4 million people, 942,000 households, and \$234.5 Billion (USD) of infrastructure are potentially exposed to moderate to severe damaging winds (with damage expected closer to the shores). All shorelines in the path of the storm are exposed to potential storm surge, and inland areas within the proximity of the storm are exposed to potential flooding. Additional updates will be provided as they become available by official sources.

ADVANCED ANALYTICS

INFORMING DECISIONS FOR A SAFER WORLD

PDC's new data processing engine and analytical tools enabled us to scale our operation to better support partners worldwide. Rapid analysis of potential hazard impacts, socioeconomic vulnerabilities, as well as new and emerging risks were analyzed throughout 2020. PDC's global data holdings have facilitated improved insight into understanding the drivers of risk and resilience in communities around the world.

IMPROVED INSIGHTS FOR

- ✓ Planning and decision making
- ✓ Disaster risk reduction investments
- ✓ Estimation and anticipation of hazard impacts and humanitarian needs
- ✓ Understanding of risk factors at a global regional, national, and subnational scale

WPS ANALYSIS

Gender Empowerment

2020 marks the 20th anniversary of the adoption of U.N. Security Council Resolution 1325. This groundbreaking resolution spearheaded a focused look at Women, Peace, and Security (WPS). In partnership with the U.S. Department of Defense, PDC began collaboration on an analysis designed to support sustainable peace through greater inclusion, justice, and security for women.

DISASTER RISK REDUCTION, PEACE, AND STABILITY

USING PDC'S TRUSTED DATA AND ANALYTICS

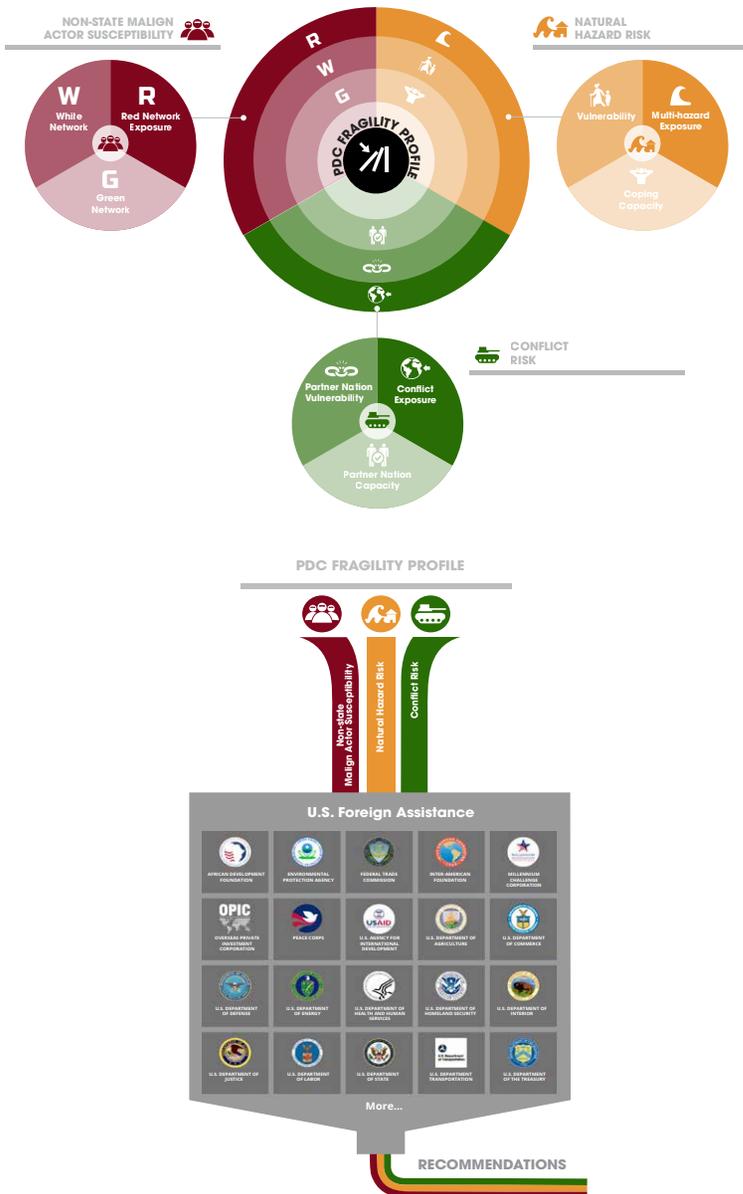

UNDERSTANDING NEW AND EMERGING THREATS

ADVANCED ANALYTICS

INFORMING DECISIONS FOR A SAFER WORLD

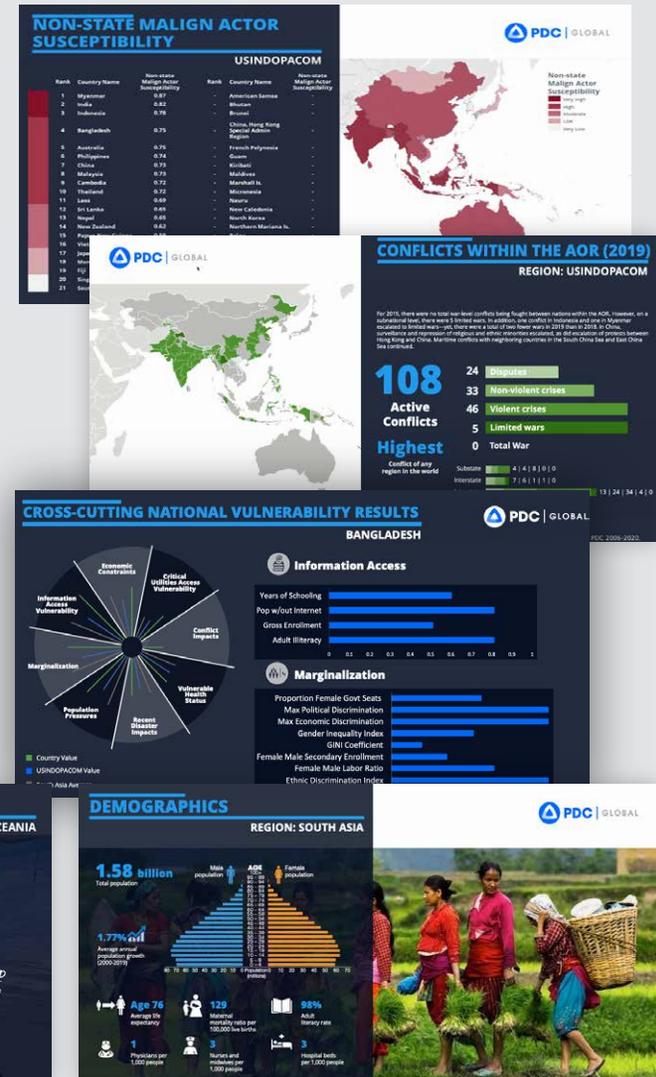

PDC'S UNIQUE FRAGILITY ANALYSIS

UNIQUE FRAGILITY ANALYSIS

- ✓ Helps identify specific drivers of regional and national instability
- ✓ Provides new insights into the ability of countries to withstand destabilizing shocks
- ✓ Combines PDC risk and vulnerability data with exclusive partner data to enhance outputs
- ✓ Offers recommendations for strategic investment and partnerships to help lower risk and bolster stability

USINDOPACOM partnered with Pacific Disaster Center to develop a regional and national fragility profile analysis. This unique examination was made possible by PDC's advanced suite of analytical tools, data visualization capabilities, and its robust global data holdings.

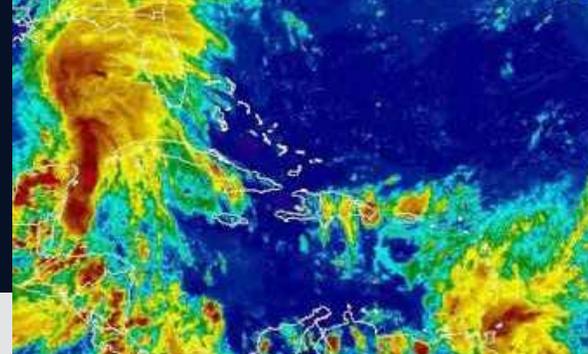

MODELING AND DATA

IMPROVING DISASTER RESPONSE

NASA AND PDC BRIDGE THE GAP IN GLOBAL FLOOD AND LANDSLIDE INFORMATION

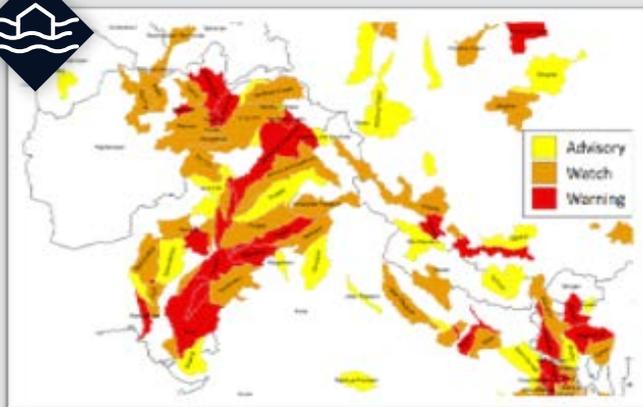

PDC | GLOBAL

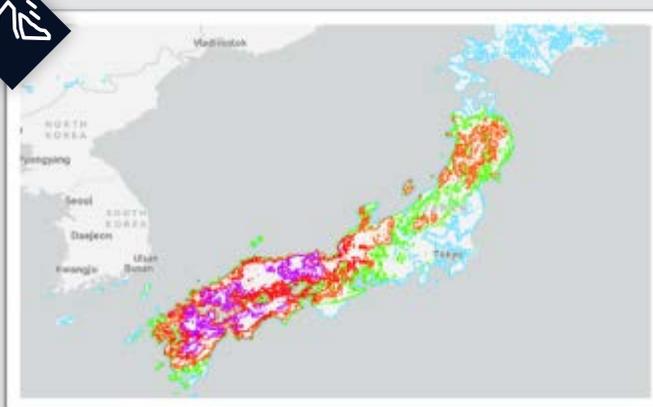

AIRFORCE WEATHER DATA TO ANTICIPATE AND PREPARE FOR CLIMATE SHOCKS

Global flood modeling and alerting

Predictive modeling for landslides

Year after year, widespread flooding inflicts the largest cost to human life and property of any natural hazard in the world. However, global detection of floods is still lacking. Currently, floods are reported around the globe from a variety of local and national sources with varying degrees of reliability—presenting a serious gap for disaster managers. To bridge this gap, PDC and NASA are developing a flood detection methodology using NASA data as well as existing models. This information will be combined into a single, reliable source of data and integrated into PDC's DisasterAWARE for global alerting and situational awareness products.

PDC partnered with the United States Airforce to integrate exclusive weather data into our DisasterAWARE platform.

It's partnerships like these that help our organizations fulfill our collective missions to reduce disaster risk and build a safer world. Together, we are helping decision makers better anticipate and prepare for climatological disruptions that may adversely impact communities.

GLOBAL FIRE DETECTION MAJOR ENHANCEMENTS

- ✓ Better urban wildfire detection
- ✓ Better grassland fire detection
- ✓ Better industrial gas fire detection (to prevent false-positives in remote sensing)

COVID-19 Global Humanitarian Mission Support

- ✓ PDC provided onsite support at U.S. Indo-Pacific Command, Southern Command (SOUTHCOM), U.S. Army Pacific, and the National Guard Bureau for COVID-19 response.
- ✓ Supported SOUTHCOM J55 strategy and planning, situational awareness, and monitoring of COVID-19 impacts on Venezuela and the surrounding region due to migration.
- ✓ PDC enhanced country-specific COVID-19 planning guidance between U.S. Embassy Freetown and the Sierra Leone Government, including the Ministry of Defense and the Office of National Security.
- ✓ Priority planning by Commands and partner nations were enhanced by exclusive subnational data provided by PDC's National Disaster Preparedness Baseline Assessment Program.
- ✓ Supported readiness planning for U.S. Afghanistan humanitarian mission, providing updates on COVID-19 as well as analysis of near and long-term food insecurity.
- ✓ Continuously integrated and updated data in DisasterAWARE to provide a common operating picture and enhanced situational awareness.

KEY PARTNER ENGAGEMENTS

JOINT ANALYSIS PRODUCTS

2020 NOTEWORTHY PARTNERSHIP ENGAGEMENTS
World Health Organization GOARN Collaboration, First Five Consortium, International Telecommunications Union (ITU) conference, Intelligent Health AI, and AI for Good Summit.

NEW DATA AND INTERNATIONAL USE

PDC strengthened data partnerships with UNOSAT, the Group on Earth Observation, Direct Relief, Facebook, and others to offer enhanced DisasterAWARE insights. It also partnered with 13 nations to integrate subnational data into DisasterAWARE to support humanitarian assistance.

In 2020, DisasterAWARE was adopted by UNICEF AND WFP emergency operations centers.

NEW CAPABILITIES AND DEMAND

PDC expanded capabilities and utilization of advanced analytical products globally through several key partnerships, including:

- ACAPS
- AHA Centre
- International Displacement Monitoring Centre
- International Federation of Red Cross
- World Food Programme
- United Nations OCHA ROAP and ROLAC

Products are briefed regularly and used by White House Office of Intergovernmental Affairs, FEMA Office of Administrator, NRCC, RRCCs, State Governor's Offices, and State EOCs.

SUPPORT TO NATO

Continued NATO disaster management engagement through leadership course development and annual conference support.
