and Sharing

DisasterAWARE is used by tens of thousands of disaster management professionals around the world—serving diverse groups ranging from the senior-level decision makers to the operational practitioner. It provides global multi-hazard early warning, hazard monitoring, and risk intelligence to support rapid and effective disaster response, preparedness,

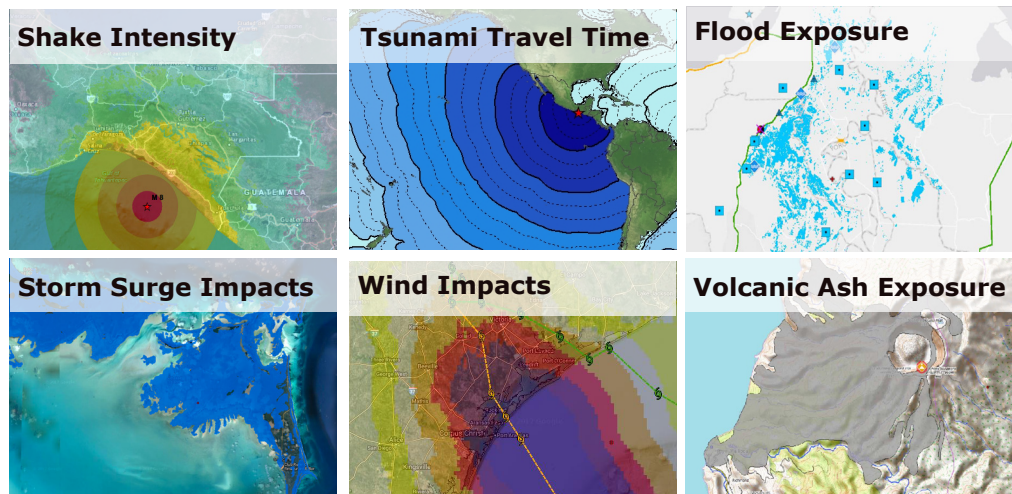

recovery, and mitigation. DisasterAWARE includes the highest resolution all-hazards impact models, advanced analytical reports, and augmented information through artificial intelligence. The system features the largest, scientifically-vetted big data catalog for disaster management decision making in the world—derived in part from PDC’s unique

National Disaster Preparedness Baseline Assessment as well as its Global Risk and Vulnerability Assessment. Customized versions of DisasterAWARE have been deployed by PDC in locations around the world and are used operationally by national and regional agencies to support all aspects of disaster management.

CUSTOMIZED SOLUTIONS

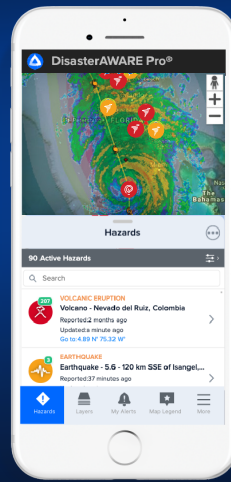

“

Natural hazard risk remains a major challenge for governing authorities globally, and being able to quickly assess the level and related potential risks to nuclear facilities when they strike is crucial to support our Member States in protecting people and the environment.

— Paolo Contri, DisasterAWARE user and Head of the International Atomic Energy Agency Section on External Event Safety

”

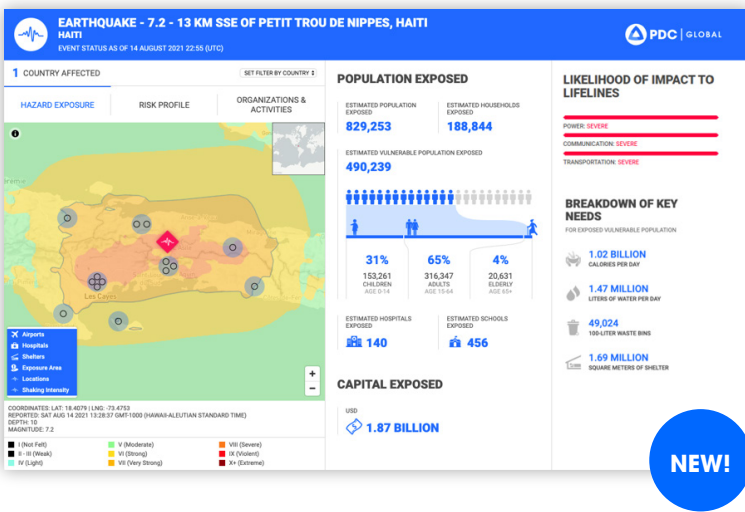

Smart Alert™

Real-time hazard monitoring and customized early warning notifications anywhere around the globe.

DisasterAWARE takes the guesswork and excessive noise out of your early warning notifications. With our unique Smart Alert technology, you tell us about the area(s) you want to monitor, and we'll tell you about hazards inside and outside that area that you need to worry about—automatically.

EVENT BRIEF ANTICIPATED IMPACT REPORT

Event Brief provides critical, life-saving information to aid rapid response during large-scale hazard events that pose potentially devastating impacts.

- Estimated population exposure, critical infrastructure, and capital exposure
- Potential impacts to lifelines
- Estimated humanitarian needs
- Risk and vulnerability information
- Live cameras
- Humanitarian organizations operating in the affected area
- Current weather conditions
- Latest maps and products shared by PDC and other response organizations
- Historical event impacts for comparison
- Travel and health advisories
- Top news stories about the event
